## SUMMARY

---

Associate Engineering Analyst with hands-on experience in Oracle, PostgreSQL, and Amazon Redshift. Skilled in SQL, ETL, data migration, stored procedure development, data validation, query optimization, and data transformation. Experienced in working with large datasets, database management, and data processing to deliver efficient, accurate, and reliable data solutions.

## EDUCATION

---

### B.Tech in Computer Science and Engineering

I.T.S Engineering College – **CGPA: 7.52**

2022-2026

Greater Noida, India

## EXPERIENCE

---

### QUALTECH | Database Intern

Jan 2026 – Aug 2026

- Worked on SQL query development, stored procedures, and database management tasks.
- Performed ETL operations, including data extraction, transformation, and loading.
- Gained hands-on experience with Oracle, PostgreSQL, and Amazon Redshift while working on real-world business requirements.

### QUALTECH | Associate Engineering Analyst (Current)

- Developing and optimizing SQL queries, stored procedures, and database objects to support business requirements.
- Performing ETL operations, data migration, and data transformation across multiple database systems.
- Working with Oracle and Amazon Redshift to manage, validate, and process large datasets.

## TECHNICAL SKILLS

---

**Programming:** SQL , Python

**Data Engineering:** ETL, Data Migration, Data Transformation, Data Validation , PL/SQL

**Developer Tools/ Technologies:** Git, GitHub, VS Code , DBeaver , AWS

**Databases :** MySQL , PostgreSQL , Oracle , Amazon Redshift

## PROJECTS

---

### • Customer Data Migration and ETL Pipeline

**Tech Stack** - SQL, Amazon Redshift, ETL, DBeaver

- Designed and implemented ETL workflows to extract, transform, and load customer data while ensuring data accuracy, consistency, and efficient data migration between source and target tables.
- Created and managed staging tables, developed SQL queries and stored procedures, implemented customer data mapping, and performed data validation and duplicate record identification using Amazon Redshift.

### • Customer Identity Resolution and Data Mapping System

**Tech Stack** - SQL, Amazon Redshift, ETL, DBeaver

- Designed and implemented a customer identity resolution process by applying multiple matching rules and developing SQL-based data mapping logic to identify existing and new customer records during the ETL process.
- Performed duplicate detection, data validation, data integration, and quality checks on large datasets in Amazon Redshift to ensure accurate record matching, data consistency, and data integrity across source and target tables.

## CERTIFICATIONS

---

- Database Management System :- Infosys Springboard
- AWS :- AWS Academy
